

Hello everyone,

It is with great pleasure that we would like to announce our improved customer service. Our hotline service coupled with an escalation process will ensure a timely response and the benefit for you to be directed to the right support person for your request. We hope that this new system will enable BiblioMondo to continue meet your evolving needs and to help us provide premium services to our customers.

Read the following news about our company and about the recent improvements of our various solutions. As always, we take this opportunity to encourage you to send us your suggestions, which help develop solutions that meet your needs.

*Enjoy your reading!

The Company BiblioMondo

Thanks to our major clients in Quebec and to several major new European contracts, including the Netherlands and France, BiblioMondo is moving forward with an expansion of its headquarters by acquiring a brand new building located on Papineau Avenue in Montreal, near major arteries.

BiblioMondo already has international subsidiaries in the United States (Portsmouth), France (Paris), Germany (Cologne), Netherlands (Hoofddorp) and the UK (Stevenage).

With the acquisition of a former Desjardins regional bank center building, we seized the opportunity to gather under one roof its secondary data center and all of its premises in one location, which is better suited to the needs of our customers. At the same time, the company will meet the challenge of transforming a strongbox safe previously part of the bank into a library model using all BiblioMondo softwares (PortFolio 7.1, Zones 2.1, Mondo*PC, Mondo*Media, Mondo*Nav, Mondo*Shift,...) and its new digital library solution, Cognisem.

The ILS PortFolio

PortFolio version 7

We are pleased to announce that PortFolio version 7 has been put into service. This version has a greatly improved user-friendly interface, new features and improved communication with public access catalogs (PACs).

Improved graphical user interface

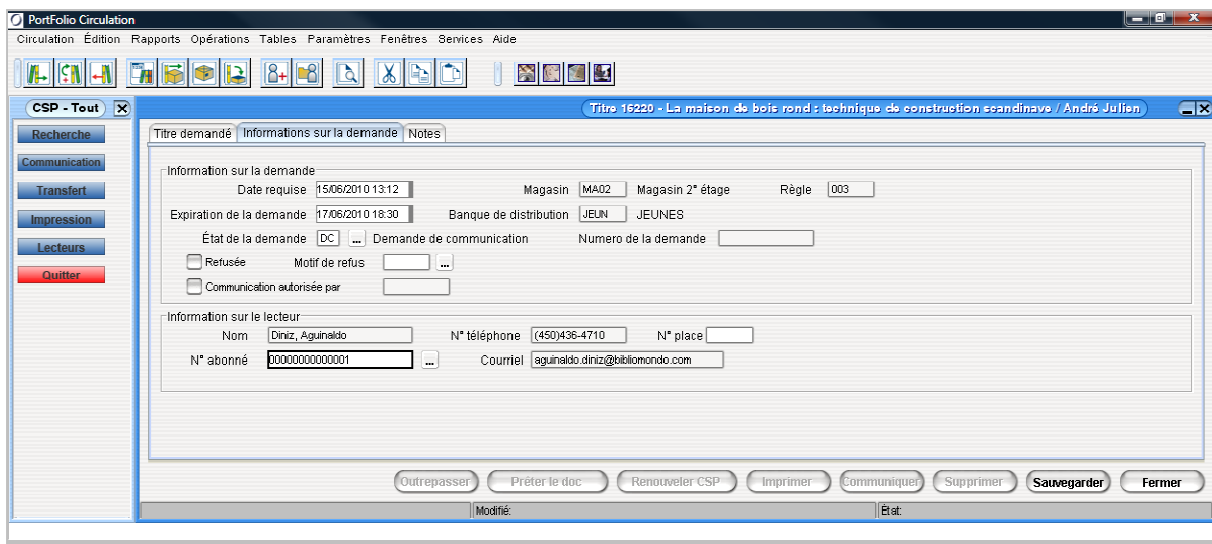

The interface of the Circulation module has been greatly improved and new buttons have been added for a clearer and more user-friendly navigation.

Improved PortFolio-Zones interface

The PortFolio/Zones interfacing (called PortFolio Web Service or PWS) has been greatly optimized. This version allows faster connection to the system and to the customer account, including fees and current reservations.

Communication on site (CSP)

In the Circulation module, it is now possible to make a request for documents stored in remote stores.

The PACs Mondo*Media & Zones

Here are the new features of our content management system and our public access catalog (PAC).

Search

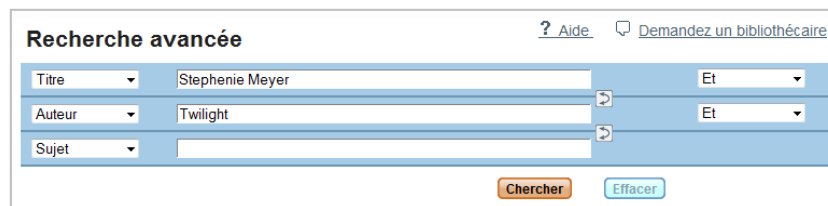

Free form refining search box

In addition to the use of facets, it is now possible to refine a search using a text entry field located above the facets. A button is next to each criterion added to remove them if necessary.

Flip buttons

Between the advanced search fields, flip buttons have been added in order to switch the content of one field to another, therefore avoiding to retype.

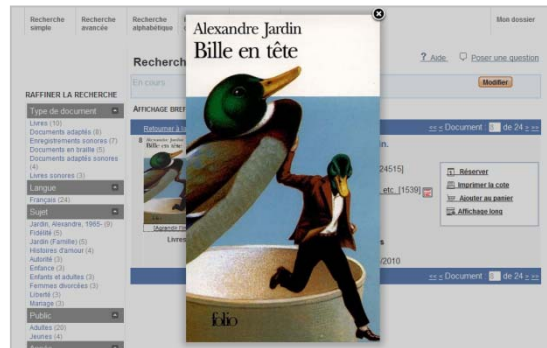

Thumbnail images

Digital document handling

You can now generate thumbnails from media predefined tags (such as the standard 856 tag) for collections of digital documents without an ISBN.

Clickable Thumbnails and zoom

In the list of search results, it is now possible to click on the thumbnail of a document or its title. In addition, you can also click on a magnifying glass at the bottom of the image to see a larger version.

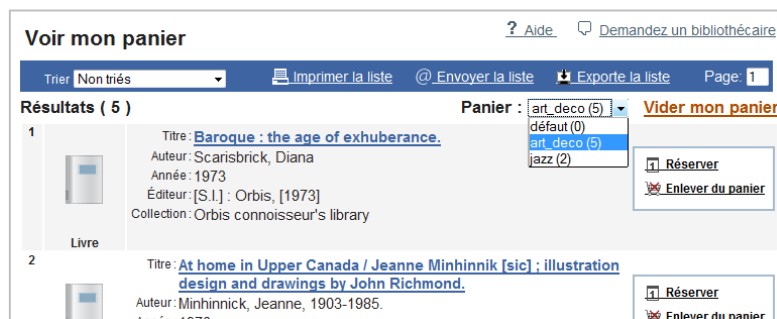

Record basket

Basket exportation

The exportation of record basket is now available in several formats (doc, csv, xml, pdf and laugh), thus facilitating the generation of bibliographies and the importation of lists to bibliographic managers such as Zotero.

Multi-basket

This option allows a customer to create several baskets of records to classify them.
